Art Unit: 2837

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prior art fig 1 in application in view of Ichikawa et al , White et al , Baez and Balch et al

Prior art of fig 1 in application discloses electric drive system comprising first and second drive wheels see fig 1 #20, and #21. Prior art lacks disclosing motor comprising first and second rotor and common stator, rotors rotate independently, cavity, and closed loop torque and speed controller. Ichikawa et al discloses motor with first and second rotor and common stator ,see fig 20,#31,#32, 18B and claim 15. White et al discloses rotor shaft and different rotors with independent rotation, see paragraph 0019. Baez discloses cavity , see col 3 lines 5-10. Balch et al discloses closed loop speed and torque controller see fig 1 and page 2 paragraphs 2-4. It would have been obvious to one of ordinary skill in the art to combine the electric system of Prior art fig 1 with rotors and stator of Ichikawa et al , independent rotation of rotors , of White et al and cavity of Baez and closed loop controller of Balch for improved control and limits the need for additional mechanical assemblies.

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 2837
